

Angular Service

Angular Service

Singleton

Angular Service

- service()
- factory()
- provider()

Angular Service

- service()

```
angular.service('someService', constructor)
```

Angular Service

- service()

```
app.service('helloWorldService', function () {  
  this.sayHello = function () {  
    return "Hello, World From service()";  
  };  
  this.sendHello = function () {  
    return "Hello, World From sendHello service()";  
  };  
});
```

Angular Service

- service()

```
app.controller('myCtrl', function($scope, helloWorldService) {  
    $scope.hello = function () {  
        $scope.say = helloWorldService.sayHello();  
    }  
});
```

Angular Service

- factory()

```
angular.factory('someFactory', function)
```

Angular Service

- factory()

```
app.factory('helloWorldFactory', function () {  
  return {  
    sayHello: function () {  
      return "Hello, World From factory()";  
    }  
  };  
});
```

Angular Service

- factory()

```
app.controller('myCtrl', function($scope, helloWorldFactory) {  
  $scope.hello = function () {  
    $scope.say = helloWorldFactory.sayHello();  
  };  
});
```

Angular Service

- provider()

```
angular.provider('someProvider', provider)
```

Angular Service

○ provider()

```
app.provider('helloWorld', function () {  
    this.name = "";  
    this.$get = function () {  
        var name = this.name;  
        return {  
            sayHello: function () {  
                return "Hello, " + name + " From provider()";  
            }  
        };  
    };  
    this.setName = function (name) {  
        this.name = name;  
    };  
});
```

Angular Service

- provider()

```
app.config(function (helloWorldProvider) {  
    helloWorldProvider.setName("World");  
});
```

Angular Service

- provider()

```
app.controller('myCtrl', function($scope, helloWorld) {  
  $scope.hello = function () {  
    $scope.say = helloWorld.sayHello();  
  };  
});
```

library

○ ngStorage

library

- ngStorage

Require ngStorage and Inject the Services

```
angular.module('app', [  
  'ngStorage'  
]).controller('Ctrl', function(  
  $scope,  
  $localStorage,  
  $sessionStorage  
){});
```

library

- ngStorage

Read and Write | Demo

Pass `$localStorage` (or `$sessionStorage`) by reference to a hook under `$scope` in plain ol' JavaScript:

```
$scope.$storage = $localStorage;
```

library

- ngStorage

Delete | Demo

Plain ol' JavaScript again, what else could you better expect?

```
// Both will do  
delete $scope.$storage.counter;  
delete $localStorage.counter;
```

library

○ ngStorage

Delete Everything | Demo

If you wish to clear the Storage in one go, use the `$reset()` method:

```
$localStorage.$reset();
```

library

○ Angular-jwt

Ref : <https://github.com/auth0/angular-jwt>

library

- Angular-jwt

Decoding the Token

```
angular
.module('app', ['angular-jwt'])
.controller('Controller', function Controller(jwtHelper) {
    var expToken = 'eyJ0eXAiOiJKV1QiLCJhbGciOiJIUzI1NiJ9.eyJpc3MiOiJodHRwczovL3NhbmXBsZXMuYXV0aDAuY29tLyIsInN1YiI6ImZlbnRlc28yMjE0LnR1byIsImF1dG8iOiJkaWQ0MDA0LmF1dG8iLCJhdWUiOiJkaWQ0MDA0LmF1dG8iLCJleSI6MTkxOTUyMDE5fQ.';

    var tokenPayload = jwtHelper.decodeToken(expToken);
});
```

library

- Angular-jwt

Getting the Token Expiration Date

```
angular
  .module('app', ['angular-jwt'])
  .controller('Controller', function Controller(jwtHelper) {
    var date = jwtHelper.getTokenExpirationDate(expToken);
  });
```

library

- Angular-jwt

Checking if the Token is Expired

```
angular
  .module('app', ['angular-jwt'])
  .controller('Controller', function Controller(jwtHelper) {
    var bool = jwtHelper.isTokenExpired(expToken);
  });
```
